

Raising the Bar for Excellence with

Sense Anywhere

Wireless sensing, logging and control... Anywhere.

SenseAnywhere sensors are ultra low-power wireless sensors that communicate with and store data in the cloud.

SenseAnywhere sensors are easy to install, use and maintain, and have a 10-year battery life, the longest battery life in its class.

SenseAnywhere is a true turn-key solution.

Monitor critical assets in storage and in transit with SenseAnywhere

Next Generation cloud based dataloggers for all your sensitive materials and storage needs

Measures Temperature

Measures Humidity

Tracks Motion

Monitors CO₂ Levels

Sends data to the user

Alarms users if necessary

Monitor your critical assets every step of the way from production to consumption!

What makes SenseAnywhere Unique? **It's EASY!**

EASY to Install

Register & Connect = Ready!
Under 10 minutes
No cables or software

Easy to Use

Cloud Based
All Industries

Easy to Maintain

No back-ups
No maintenance
Lifetime battery (10 yrs.)

Masy BioServices has partnered with SenseAnywhere to offer a reliable, cost effective, and simple solution for tracking critical environmental conditions, including relative humidity, pressure, temperature, and motion.

What is Mobile Asset Tracking?

Mobile Asset Tracking ("MAT") is a broad term for any technology that allows a company to track the location or status of a physical item.

The SenseAnywhere AiroSensor provides an affordable, effective, and surprisingly simple solution to the problem of keeping tabs on sensitive products in transit. The wireless temperature and humidity sensor, as well as a motion tracking unit can be placed within a transport crate or packaging, allowing you to monitor the environmental conditions of your product in real time.

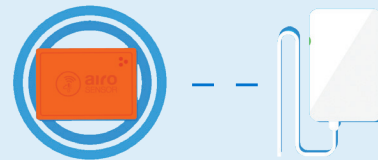

All data alerts, device setup, and deployment are controlled by a secure, easy to use cloud portal.

Key Capabilities of SenseAnywhere Monitoring

- Up to 10 year battery life
- Logs up to 18,500 events
- Seamless integration with the cloud
- Extremely simple to deploy and use
- Auditable, real-time monitoring of key environmental factors (RH, temperature, and motion)
- GPS location and tracking
- IP-67 Rated option- Waterproof and shock resistant for the harshest applications
- Extremely small and durable (can be placed inside packaging to accurately monitor critical contents)

Visit the SenseAnywhere website to see additional technical details and case studies at www.senseanywhere.com

How it Works

The AiroSensor sends data through an AccessPoint to the Cloud. From the Cloud the data is accessible to the user from any smart device.

Easy Wireless Datalogger Deployment

SenseAnywhere's price and high accuracy solves deployment issues by combining traditional geolocation/check-in tracking with integrated temperature, humidity, and motion monitoring. Setup is extremely simple, only requiring each data logger to be connected to the Internet via a RJ-45 ethernet cable for 30-60 seconds. Once your units are activated, you can immediately label them, set up alerts, and track results through the secure online dashboard.

Deploy a SenseAnywhere access point at your sending and receiving warehouses for automated check-in, or include one on the transport vehicle for real-time reporting. All data is sent via a secure connection to the cloud for fast access and retention. If your data logger is lost or damaged, your uploaded data is securely backed up, and replacements are easy to deploy.

SenseAnywhere

Effective Asset Tracking
Made Simple.

**Masy BioServices is proud to be
the Exclusive North American
Distributor of SenseAnywhere.**

Capabilities

The accuracy of our primary standards and measurement instrumentation is the foundation of our Metrology, Validation, cGMP BioPharma Storage, Continuous & Predictive Monitoring Systems, and Equipment Sales & Rentals services.

cGMP BioPharma Storage

Secure, monitored, cGMP off-site storage of temperature sensitive samples and products, at conditions from -196°C (LN₂) to 70°C including ICH stability storage and custom conditions. Our BioPharma storage is backed by multiple redundant systems for your product's security and your peace of mind.

Metrology & Calibration

NVLAP-accredited calibrations, traceable to the SI, for your primary reference standards and laboratory instruments with proven industry-best measurement uncertainties

Validation & Qualification

Comprehensive IQ/OQ/PQ validation protocols for controlled temperature units, environmental chambers, warehouse mapping, sterilizers, autoclaves, lyophilizers, and more

Continuous Monitoring Systems

Reliable 24/7 continuous monitoring systems with 21 CFR Part 11 compliance meet GMP requirements for critical spaces, featuring excursion alerts and remote viewing and reporting. Predictive monitoring the critical parameters of integrated systems to prevent unforeseen equipment malfunctions before chamber failure.

Equipment Sales & Rentals

Calibration and validation equipment for rental or purchase, including weight sets, conductivity standards, validators, dataloggers, thermocouples, RH, CO₂ and pressure sensors, Fluke products, gaskets and clamps.

Masy BioServices is one of a select number of metrology laboratories in North America that meets the rigorous qualifications for National Voluntary Laboratory Accreditation Program (NVLAP) accreditation to ISO 17025-2005. Our current NVLAP scope can be viewed at masy.com/accreditation.

Masy BioServices is certified to ISO 9001-2015 in recognition of our adherence to a robust quality management system.
