

Ethernet I/O

Easy Peer-to-Peer Communication with Acromag i2o®

i2o input-to-output communication

Acromag's i2o technology provides the easiest way to link your inputs to your outputs without a PLC, PC or master CPU.

With i2o, many BusWorks 900EN I/O modules have the ability to operate like a long-distance transmitter. You can convert your sensor inputs at Point A to process control signals at Point B. Or, monitor a discrete device at one site by reproducing the discrete level with a relay output at another location.

Use your existing Ethernet lines to save time and wiring expenses

You can connect the input modules to the output modules using your existing copper/fiber infrastructure or with a single new cable. Multiple I/O modules can be multiplexed through a switch or wireless radios.

No complicated controllers.

No software. No programming.

Acromag's Ethernet I/O modules have a built-in web page making it simple to configure using your standard web browser. Just click a few menu settings, enter the IP addresses, and you are done. Fast and easy.

BusWorks XT Series I/O Modules

Up to 12 channels per module and reliable, failsafe communication

Monitor up to a dozen devices with a single pair of I/O modules. Discrete I/O modules have twelve channels that you can set up as inputs or as outputs in four-channel groups. This allows bi-directional communication between two modules. Analog input modules measure up to six current, voltage, thermocouple, or RTD sensor signals. This data is then transmitted to a six-channel analog output module providing DC current or voltage output signals.

Wire-saving applications

Our i2o technology lets an input module speak directly to an output module. It is ideal for non-critical projects that don't need a PLC or PC master. Reproduce remote signals based on timed or event updates.

- Remote monitoring of process variables (temperature, pressure, level, flow) and discrete devices
- Remote data display, recording, alarms, or control
- Signal splitters
- Analyzer system monitoring
- Power and water utility monitoring
- Tank level, pump, and valve control
- Remote monitoring of motor loads and contactor status
- Remote control switching stations
- Environmental control systems
- Process shutdown, alarming, and annunciator systems
- RFID systems

Peer-to-Peer Communication

Analog Inputs

4-20mA,
0-10V DC,
thermocouple,
RTD/resistance

Discrete Inputs

on/off,
high/low,
open/close,
momentary
push-buttons

Any Ethernet Media

Copper, fiber,
wireless, or Internet

Input-to-Output
input channel writes
to the output channel

(uni-directional or bi-directional communication)

Analog Outputs

proportional
4-20mA or
0-10V DC

Discrete Outputs

on/off,
high/low,
open/close

EtherStax I/O® also supports i2o

Ethernet I/O: BusWorks® XT Series

Acromag i2o® Technology for Peer-to-Peer Communication

XT Series Modules with i2o

Analog Input Modules

XT1211
8 differential current inputs

XT1221
8 differential voltage inputs

XT1231
16 single-ended current inputs

XT1241
16 single-ended voltage inputs

Discrete I/O Modules

XT1111
16-channel sinking outputs

XT1121
16-channel sourcing outputs

Combination I/O Modules

XT1531
4 analog current outputs,
4 discrete I/O

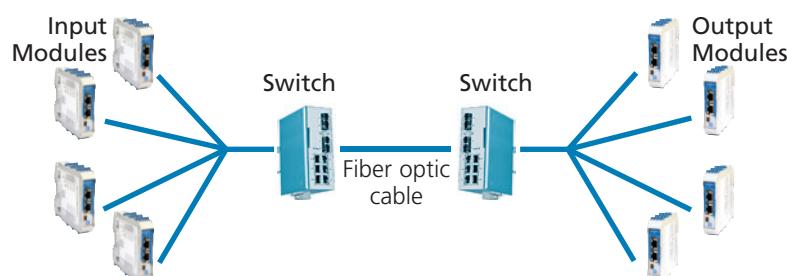

XT1541
8 analog voltage outputs,
4 discrete I/O

Installation #1: Copper Ethernet network

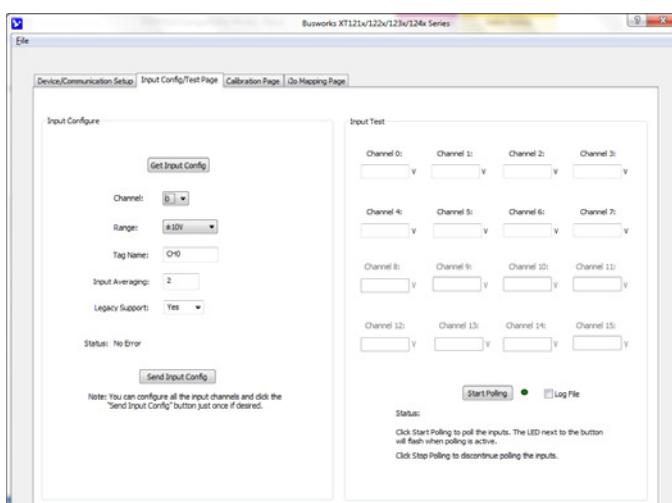

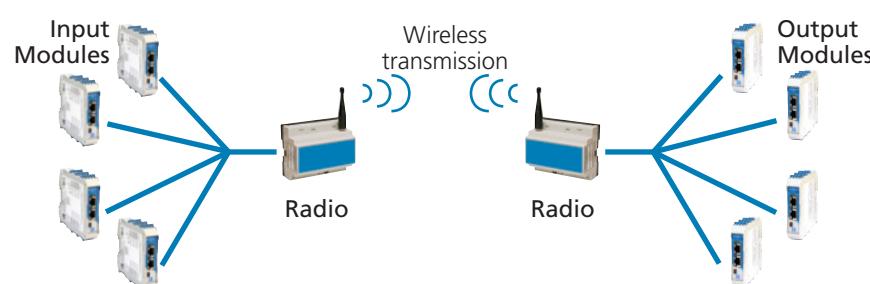

NOTE: Buy modules in pairs. For example:
AI with AO
DIO with DO or DIO
Combo with Combo

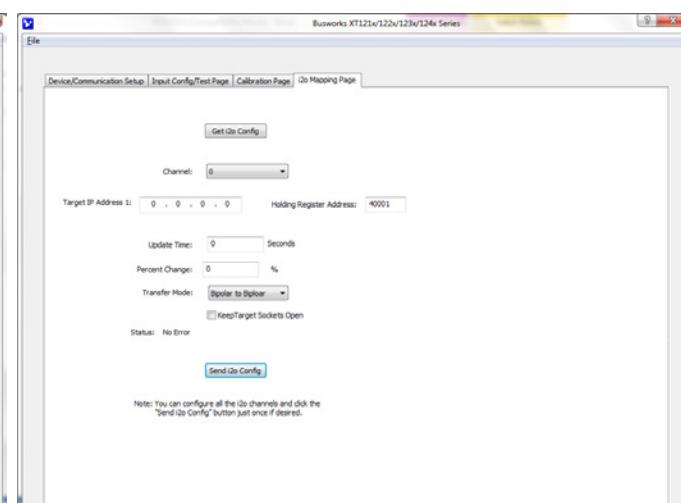

Installation #2: Fiber optic connection

Installation #3: Wireless connection (telemetry systems)

Ethernet I/O: BusWorks® Series

Acromag i2o® Technology for Peer-to-Peer Communication

900EN Series Modules with i2o

Analog Input Modules

- 961EN / 962EN
6 differential current/voltage inputs
- 965EN
6 thermocouple/mV inputs
- 966EN
6 RTD/resistance inputs
- 967EN / 968EN
8 differential current/voltage inputs

Analog Output Modules

- 972EN
4 or 6 current outputs
- 973EN
4 or 6 voltage outputs

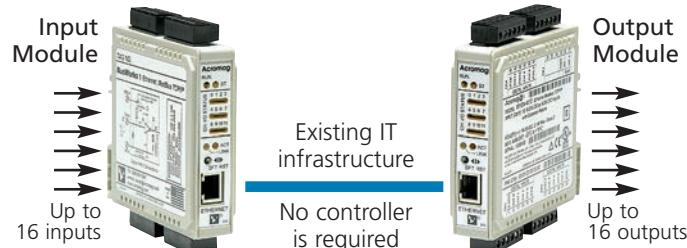

Discrete I/O Modules

- 982EN
12 solid-state relay outputs
- 983EN
12 solid-state input/outputs

Combination I/O Modules

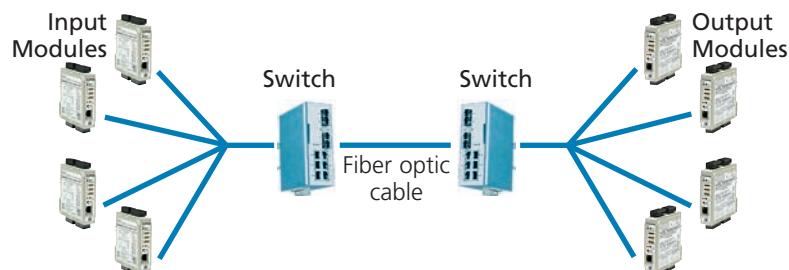

- 951EN
4 analog current inputs,
2 analog current outputs, 6 discrete I/O
- 952EN
4 analog voltage inputs,
2 analog current outputs, 6 discrete I/O

Installation #1: Copper Ethernet network

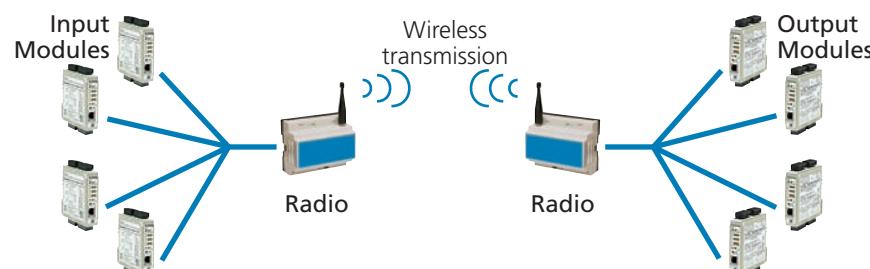

NOTE: Buy modules in pairs. For example:
AI with AO
DIO with DO or DIO
Combo with Combo

Installation #2: Fiber optic connection

Installation #3: Wireless connection (telemetry systems)
